DATE MAILED: 10/17/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

U.S. Patent and Trademark Office PTOL-326 (Rev. 08-06) Serial No.: 10/664,331 Docket No.: 397272000401
Applicants: Humeau, L., et al. Filing Date: 09/16/2003

#### Detailed Office Action

#### Status of the Claims

Acknowledgement is hereby made of receipt and entry of the communication filed 24 July, 2006. Claims 1-30, 33-64, 66-71, and 83-99 are currently under examination.

## Information Disclosure Statement

The information disclosure statement filed 24 July, 2006, has been placed in the application file and the information referred to therein has been considered.

## 35 U.S.C. § 112, First Paragraph

The following is a quotation of the first paragraph of 35 U.S.C. § 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

## Written Description

Claims 1-30, 33-64, 66-71, and 83-99 stand rejected under 35 U.S.C. § 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Regents of the University of California v. Eli Lilly & Co., 119 F.3d 1559, 43 U.S.P.Q.2d 1398, (Fed. Cir. 1997). Fiers v. Revel Co., 984 F.2d 1164, 25 U.S.P.Q.2d 1601, (Fed. Cir. 1993). Amgen, Inc. v. Chugai Pharmaceutical Co., 927 F.2d 1200, 18 U.S.P.Q.2d 1016, (Fed. Cir. 1991). Enzo Biochem,

Inc. v. Gen-Probe, Inc., 296 F.3d 1316, 63 U.S.P.Q.2d 1609, (Fed. Cir. 2002). Univ. of Rochester v. G.D. Searle & Co., Inc., 358 F.3d 916, 920, 69 U.S.P.Q.2d 1886, (Fed. Cir. 2004). In re Rasmussen, 650 F.2d 1212, 211 U.S.P.Q. 323 (C.C.P.A. 1981). In re Wertheim, 541 F.2d 257, 191 U.S.P.Q. 90 (C.C.P.A. 1976). University of Rochester v. G. D. Searle & Co., Inc., 358 F.3d 916, 69 U.S.P.Q.2d 1886 (C.A.F.C. 2004).

As previously set forth, in order to satisfy the written description requirement, a patent specification must describe the claimed invention in sufficient detail that one skilled in the art can reasonably conclude that the inventor had possession of the claimed invention. See, e.g., Vas-Cath, Inc., v. Mahurkar, 935 F.2d at 1563, 19 U.S.P.Q.2d at 1116. The issue raised in this application is whether the original application provides adequate support for the broadly claimed genus of cell surface binding molecules and cell types transduced with said molecules and a lentiviral vector. An applicant shows possession of the claimed invention by describing the claimed invention with all of its limitations using such descriptive means as words, structures, figures, diagrams, and formulas that fully set forth the claimed Lockwood v. American Airlines, Inc., 107 F.3d 1565, 1572, 41 U.S.P.Q.2d 1961, 1966 (Fed. Cir. 1997). The claimed invention as a whole may not be adequately described where an invention is described solely in terms of a method of its making coupled with its function and there is no described or artrecognized correlation or relationship between the structure of the invention and its function. A biomolecule sequence described only by functional characteristic, without any known or disclosed correlation between that function and the structure of the sequence, normally is not a sufficient identifying characteristic for written description purposes, even when accompanied by a method of obtaining the biomolecule of interest. In re Bell, 991 F.2d

781, 26 U.S.P.Q.2d 1529 (Fed. Cir. 1993). In re Deuel, 51 F.3d 1552, 34 U.S.P.Q.2d 1210 (Fed. Cir. 1995). A lack of adequate written description issue also arises if the knowledge and level of skill in the art would not permit one skilled in the art to immediately envisage the product claimed from the disclosed process. See, e.g., Fujikawa v. Wattanasin, 93 F.3d 1559, 1571, 39 U.S.P.Q.2d 1895, 1905 (Fed. Cir. 1995). The court noted in this decision that a "laundry list" disclosure of every possible moiety does not constitute a written description of every species in a genus because it would not reasonably lead those skilled in the art to any particular species.

An applicant may show possession of an invention by disclosure of drawings or structural chemical formulas that are sufficiently detailed to show that applicant was in possession of the claimed invention as a whole. An applicant may also show that an invention is complete by disclosure of sufficiently detailed, relevant identifying characteristics which provide evidence that applicant was in possession of the claimed invention, i.e., complete or partial structure, other physical and/or chemical properties, functional characteristics when coupled with a known or disclosed correlation between function and structure, or some combination of such characteristics. For some biomolecules, examples of identifying characteristics include a nucleotide or amino acid sequence, chemical structure, binding affinity, binding specificity, and molecular weight. The written description requirement may be satisfied through disclosure of function and minimal structure when there is a well-established correlation between structure and function. Without such a correlation, the capability to recognize or understand the structure form the mere recitation of function and minimal structure is highly unlikely. In the latter case, disclosure of function alone is little more than a wish for possession; it does not satisfy the written

description requirement. Regents of the University of California v. Eli Lilly, 119 F.3d 1559, 1566, 43 U.S.P.Q.2d 1398, 1404, 1406 (Fed. Cir. 1997), cert. denied, 523 U.S. 1089 (1998). In re Wilder, 736 F.2d 1516, 1521, 222 U.S.P.Q. 369, 372-3 (Fed. Cir. 1984). Factors to be considered in determining whether there is sufficient evidence of possession include the level of skill and knowledge in the art, partial structure, physical and/or chemical properties, functional characteristics alone or coupled with a known or disclosed correlation between structure and function, and the method of making the claimed invention.

The claims of the instant application are broadly directed toward a large genus of poorly defined cell surface binding molecules and potential cell targets. Concerning the cell surface binding molecules, the term molecule fails to provide any meaningful structural limitations on the molecule of interest. A molecule by definition can comprise as few as two atoms and may encompass virtually any type of organic compound, polypeptide, receptor, cytokine, lymphokine, antibody, nucleic acid, lipid, polysaccharide, lipopolysaccharide, etc. Thus, the encompass an exceedingly large genus of poorly defined molecules. The disclosure fails to provide any critical structural/functional nexus between the molecules the would enable the skilled artisan to ascertain which molecules are likely to work. For instance, is a certain type of molecule more efficient than others at improving the transduction efficiency? What are the structural requirements for any given cell surface binding agent? The claims are also directed toward an inordinate number of cell targets. All of these targets display vastly different genotypes and phenotypes. These different phenotypes result in the expression of different cell surface molecules thereby complicating attempts to predict which cell surface binding molecules will work efficiently. Considering the unpredictability of the art, the failure of the disclosure to

provide a strong structural/functional nexus between any of the cell surface binding molecules and their targets, the large breadth of the claimed invention, and the limited number of examples set forth in the specification, the skilled artisan would reasonably conclude the applicants were not in full possession of the genus of cell surface binding molecules and cell targets at the time of filing.

Applicants traverse and submit that adequate support for the claimed genus is present in the specification. This argument is not found to be persuasive for the reasons set forth supra. The disclosure fails to provide adequate structural and functional guidance pertaining to those molecules that will function in the desired manner.

#### Correspondence

Any inquiry concerning this communication should be directed to Jeffrey S. Parkin, Ph.D., whose telephone number is (571) 272-0908. The examiner can normally be reached Monday through Thursday from 10:30 AM to 9:00 PM. A message may be left on the examiner's voice mail service. If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Bruce R. Campell, Ph.D., can be reached at (571) 272-0974. Direct general status inquiries to the Technology Center 1600 receptionist at (571) 272-1600. Informal communications may be submitted to the Examiner's RightFAX account at (571) 273-0908.

Applicants are reminded that the United States Patent and Office (Office) requires most patent correspondence to be: a) faxed to the Central FAX number (571-273-8300) (updated as of July 15, 2005), b) hand carried or delivered to the Customer Service Window (now located at the Randolph Building, 401 Dulany Street, Alexandria, VA 22314), c) mailed to the mailing address set forth in 37 C.F.R. § 1.1 (e.g., P.O. Box 1450, Alexandria, VA 22313-1450), or d) transmitted to the Office using the Office's Electronic Filing System. This notice replaces all prior Office notices specifying a specific fax number or hand carry address for certain patent related correspondence. further information refer to the Updated Notice of Centralized Delivery and Facsimile Transmission Policy for Patent Related Correspondence, and Exceptions Thereto, 1292 Off. Gaz. Pat. Office 186 (March 29, 2005).

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Respectfully,

effrey S. Parkin, Ph.D.
